This volume is intended to carry on the program initiated in *Topology, Geometry, and Gauge Fields: Foundations* (henceforth, [N4]). It is written in much the same spirit and with precisely the same philosophical motivation: Mathematics and physics have gone their separate ways for nearly a century now and it is time for this to end.

We can therefore expect an intimate relation between magnetic monopoles and the topology of gauge fields. It is the aim of my talk to explain how the non-trivial topology of gauge fields is generated in Abelian gauges by magnetic monopoles [4]. 2.

The focus of the book under review is the interaction between topology, geometry and gauge fields. The book thus serves as both a solid and an enticing introduction to the mathematics required for the geometric formulation of gauge theory.

us see the geometry of topological gauge theories transform into the geometry of general relativity. The hope

is that a deeper understanding of the geometric content of topological gauge theory will provide insight into the geometry of general relativity itself, and perhaps ultimately its quantization.

gauge field on a 4-dimensional complex, a problem that has recently been examined from a wide variety of angles [3,7,8,10,13,14,15,22], some of them reviewed in [12] along with the physical context of the problem.

Such a gauge transformation is called the transition function in the theory of fibre bundles, a terminology in mathematics that basically refers to a general gauge theory.

A more sophisticated enhancement lurks in the background, the gauge theory of finite homotopy types, which detects higher homotopy information and relates to a categorical notion of the group algebra; see Lecture 3.
