Interim Final Rule Issued for the Safe Management of Recalled Airbags. In response to the Takata airbag recall, EPA determined that changes to the hazardous waste rules were needed to facilitate the collection of defective airbags, decreasing the risk of death and serious injury from airbags still in vehicles.

Acute exposure guideline levels (AEGLs) describe the human health effects from once-in-a-lifetime, or rare, exposure to airborne chemicals. Used by emergency responders when dealing with chemical spills or other catastrophic exposures, AEGLs are set through a collaborative effort of the public and private sectors worldwide.

A perfluorinated compound (PFC) per- or polyfluoroalkyl chemical is an organofluorine compound containing only carbon-fluorine bonds (no C-H bonds) and C-C bonds but also other heteroatoms. PFCs have properties that represent a blend of fluorocarbons (containing only C-F and C-C bonds) and the parent functionalized organic species. For example, perfluorooctanoic acid functions as a carboxylic ...

Hydraulic fracturing (also fracking, fraccing, frac'ing, hydrofracturing or hydrofracking) is a well stimulation technique in which rock is fractured by a pressurized liquid. The process involves the high-pressure injection of 'fracking fluid' (primarily water, containing sand or other proppants suspended with the aid of thickening agents) into a wellbore to create cracks in the deep-rock ...

1. Introduction. The transformation of biomass into chemicals has a long history. At the beginning of the 20th

century, a large number of industrial products were manufactured from wood-based resources and crops .During the past 100 years, the interest on utilization of bio-based resources is inversely correlated with the oil supply and price .However, petroleum resources are limited.
