

web application security scanner pdf

A Dynamic Application Security Testing (DAST) tool is a program which communicates with a web application through the web front-end in order to identify potential security vulnerabilities in the web application and architectural weaknesses. It performs a black-box test. Unlike Static Application Security Testing tools, DAST tools do not have access to the source code and therefore detect ...

Dynamic Application Security Testing - Wikipedia

Web application security is a branch of information security that deals specifically with security of websites, web applications and web services. At a high level, web application security draws on the principles of application security but applies them specifically to internet and web systems.
